How to get an API key

An API Key is a security key. Each application has a different API key. You get an Apikey by CegidLife as administrator

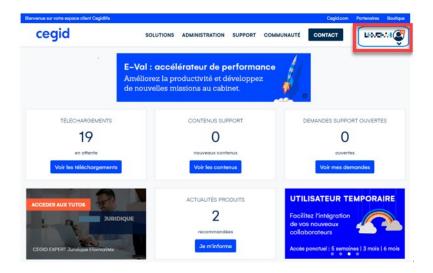

This action is to be performed in CegidLife

- 1. Connect to the address :https://www.cegidlife.com
- 2. Access and use an administrator account, using your password

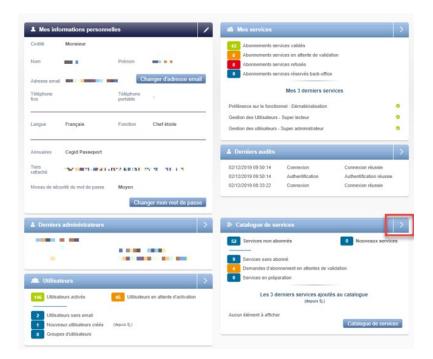

3. Access to user profile

From the main CegidLife screen, choose your profile on the right

4. Access to the catalog services

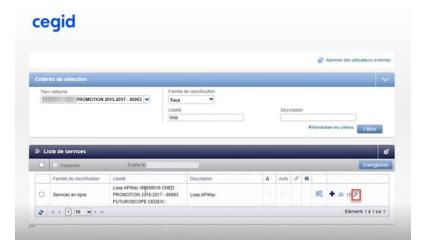

Click on the button to view the service catalog (Catalogue de services).

5. Filter the services

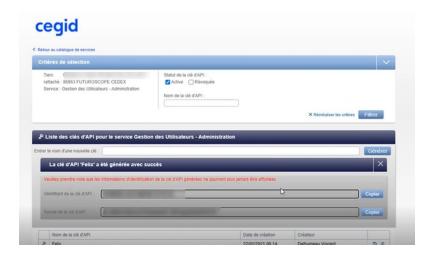

Select the option from the drop-down list "Services en lignes" and click on the button <Filtrer>. The service is "Loop APIkey"

Click on the key-shaped button corresponding to the service

6. Give the name to API key a name et click on <Générer>

You get the 2 parts of the API key: key= "identifiant" and the client secret = "secret"

The key and secret will no longer be visible after leaving the page or if you refresh the page
